

The Embedded Engineer

The backlog you've been meaning to build, actually built. Four moves, split into **two halves** you can buy separately — run by one engineer inside your business, not a dev shop outside it.

THE BUILD ENGINE · FOUR PILLARS

1 MAP

Learn the business. Find what's worth building.

- Where your week actually goes
- What to automate first — and what to leave alone
- A 90-day build roadmap

2 BUILD

Make the thing you've been putting off exist.

- Internal apps, portals and dashboards
- The software you've wanted for two years
- Integrations between tools that don't talk

3 AUTOMATE

Put AI where the repetitive work is.

- AI agents doing real, scoped work
- Workflows that run without you in them
- Reporting that writes itself

4 ADOPT

Get it into the business and keep it alive.

- Rolled out to your team and trained
- Documented so it survives turnover
- Maintained and improved every week

OFFER 1 · PILLARS 1 + 2

Build Your Project

Map + Build — the backlog in your head, turned into software

OFFER 2 · PILLARS 3 + 4

Launch Your Project

Automate + Adopt — AI on top, and a team that actually uses it

BOTH HALVES TOGETHER

The Embedded Engineer

A build roadmap before day one

Exactly what gets built, in what order, and what it replaces — agreed before you commit.

WHICH ONE IS YOU?

OPTION 1

Build Your Project

"There are three things I've been meaning to build for two years and none of them exist."

You don't need another tool. You need **somebody to actually build it** — starting with the one that buys back the most time.

OPTION 2

Launch Your Project

"We built it. Nobody uses it, it still needs me, and half of it is manual."

Built isn't shipped. We add the **AI layer, the automation and the adoption** that make it run without you.

SEPARATE TRACK

Fractional Go-to-Market

"Honestly? My bottleneck isn't systems. It's not enough clients."

Then point the engineer at acquisition instead. Same model — and that track carries a **\$50K / 90-day pipeline guarantee**.

HOW EVERY OPTION IS DELIVERED

- ✓ **A real engineer, ~30–35 hrs/week**, embedded in your business
- ✓ **Coaching + on-demand support** — your team comes to us, not to you
- ✓ **A buy-out path** — bring the engineer in-house whenever you want
- ✓ **Architected by us** behind the scenes, in a shared Slack channel
- ✓ **One flat fee** — the engineer's salary included, no payroll or HR
- ✓ **90-day terms** — we map the roadmap, then renew against what's next

INCLUDED IN EVERY OPTION

A dedicated engineer working directly for your business.

THE SINGLE BRAIN

Every tool, system, agent and offer we've built — not just one seat.

YOU OWN WHAT WE BUILD

The code, the systems, the documentation. It stays yours.

Point one engineer at the list you keep ignoring.

A 20-minute call is enough to tell you what we'd build first.
