

FRACTIONAL GO-TO-MARKET

You are almost certainly sitting on more pipeline than you'll generate this quarter.

The problem isn't your marketing. It's that nobody in your business has the **time**, the **systems**, or the **mandate** to work what you already own — and the market has trained you to solve that by hiring the wrong kind of help.

01 The situation, said plainly

Every business we look at has three assets it is not converting: a list it stopped emailing, a network it never systematized, and an audience it could borrow but never asks.

Those aren't marketing problems. They're **labor** problems. Working a dormant database properly is weeks of unglamorous execution. Turning twelve referral relationships into a repeatable channel means someone has to run that process every week, forever. Getting in front of somebody else's audience means research, outreach, follow-up, and a hundred small assets nobody has time to build.

So it doesn't get done. Not because you don't know it works — you do — but because the person who'd have to do it is you, and you're the constraint. Almost every stalled go-to-market motion we see traces back to that one sentence.

02 Why the three obvious fixes don't work

You've probably tried at least one of these. Each fails for a structural reason — not because you picked a bad vendor.

FIX #1**Hire an agency**

Agencies sell **rented attention**. Stop paying and it stops. And they never touch the assets you already own, because your dormant list and your network aren't billable media spend.

FAILS: RENTS, DOESN'T BUILD

FIX #2**Hire in-house**

A real hire is a salary, a recruiting cycle, benefits and months of ramp — and then **you** manage them and act as their senior. You bought labor and inherited a second job.

FAILS: YOU STAY THE BOTTLENECK

FIX #3**Buy more tools**

Software doesn't do the work; it makes the work visible. A CRM full of leads nobody calls, an AI writer nobody points — tools widen the gap between what could happen and what does.

FAILS: CAPACITY ISN'T EXECUTION

THE PATTERN

All three sell you **more capability**. None of them give you a person inside your business whose entire job is executing your go-to-market, with someone senior standing behind them making sure it's built right.

03 The mechanism: the Owned-Audience Engine

There are exactly four places a client can come from. Not five. Not twelve. Four. We named them, sequenced them, and turned them into an engine one person can run.

PILLAR 1 ACTIVATE

The buyers already in your database. Email, a flagship newsletter, dormant-list reactivation, and a fresh leads database built from what's already yours.

PILLAR 2 OWN

Your network run like an actual channel. JVs, power partners and first-degree connections — plus cold email and LinkedIn where they fit.

PILLAR 3 FIND

Audiences that don't know you exist. Podcast placements, influencers, YouTube channels, co-promoters and events — borrowed attention, at scale.

PILLAR 4 BUILD

A community that compounds. The community itself, traffic into it, a content engine that feeds it, and your offer productized so there's a clear thing to buy.

The order matters, and it's the part most people get backwards. Pillars 1 and 2 harvest demand that already exists — the fastest money in the business, and it costs nothing to reach. Pillars 3 and 4 manufacture demand that doesn't exist yet — slower to start, but they're what stops you ever running out. Run 3 and 4 without 1 and 2 and you're paying to create attention you aren't equipped to convert. Run 1 and 2 forever and you eventually exhaust your own universe.

That's why the engine splits cleanly in half — and why we let you buy it that way.

OFFER 1 · PILLARS 1 + 2

Build Your Pipeline

Pipeline out of assets you already own. Your list, your CRM, your past leads, your relationships. Nothing here requires you to become famous or spend on media.

Choose this if you look at your database and think: *there is money in here and I have no idea how to get it out.*

OFFER 2 · PILLARS 3 + 4

Fill Your Pipeline

New audience, converted into a community. We put you in front of audiences other people spent years building, then build you one of your own so you stop borrowing.

Choose this if you've worked everyone you know and the well is visibly running dry.

BOTH HALVES TOGETHER = FRACTIONAL GO-TO-MARKET

Run together they form a closed loop: Find and Build create attention, Activate and Own convert it, and everything that doesn't close this quarter goes back into the database for the next one. This is the complete offer — and the only configuration that carries the guarantee.

04 Who actually runs it

A strategy document has never generated a lead. The engine only matters because of how it's delivered — and this is the part that's genuinely different from anything else you can buy.

We place a Go-to-Market Engineer inside your business, roughly 30–35 hours a week. Not a contractor you brief and chase. Not an account manager. A person whose working week is your go-to-market, who learns your business, your offers and your customers the way an employee would.

Behind them, in a shared Slack channel, **we architect everything**. You give the engineer direction; we make sure what they build is built right, and we keep it moving. You get senior architecture without paying for a senior full-time seat — and your team escalates to us, not to you.

- **One flat monthly fee, salary included.** No recruiting, no payroll, no benefits, no HR.
- **Coaching and on-demand support** for your team, so the management burden comes off your plate instead of landing on it.
- **A buy-out path.** If the engineer becomes indispensable — which is the point — you can bring them in-house.
- **90-day terms.** We map the roadmap, run it, then renew against a re-mapped plan. You're never locked into last quarter's assumptions.
- **The Single Brain, included.** Every tool, system, agent and offer we've built across every engagement. You aren't buying one person's output; you're plugging into the whole stack.

An agency sells you attention. A hire sells you hours. This gives you a person inside your business with a senior architect standing behind them — and it builds assets you keep.

05 The third option — when it isn't go-to-market at all

Sometimes we get on a call and it's obvious within ten minutes that acquisition isn't the problem. The pipeline is fine. What's broken is delivery, operations, reporting, or a back office held together by the owner's memory.

For that there's a separate track. Same embedded model, same architecture behind the scenes, same Single Brain — **pointed somewhere other than getting clients.**

SEPARATE TRACK · NOT GO-TO-MARKET

The Embedded Engineer

An engineer who intricately learns your business — specific to you — and builds AI automation systems wherever you need them: **software development, operations, or lead-gen and marketing**. You point them; we make sure it's built properly.

No pipeline guarantee attaches to this track, and that's deliberate. The guarantee is tied to client-acquisition activity. If we aren't running your acquisition, we won't pretend to underwrite it.

THE DECISION RULE

Ask one question: **what is your single most important objective for the next 90 days?**

More clients from what you already have → **Build Your Pipeline.**

More clients from audiences you don't have yet → **Fill Your Pipeline.**

Both, with the guarantee attached → **Fractional Go-to-Market.**

Anything that isn't getting clients → **The Embedded Engineer.**

You can start with one and change at the 90-day mark. Most people should.

06 What this looks like when it works

MoneyEDU. A dormant list — the kind of asset that shows up on every balance sheet as nothing. We ran Pillar 1 against it: reactivation sequences, proper segmentation, and an offer worth responding to. **It produced 100 booked appointments.**

No new ad spend. No new audience. No new brand. The pipeline was already sitting in a database somebody had stopped opening — which is the entire argument of this document, demonstrated once, cleanly.

THE HONEST VERSION

That's the proof point we can name, so it's the one we lead with. We'd rather show you one real result than five vague ones. Everything else here describes the system and what it's designed to produce — any numbers we quote for a specific engagement are **targets and guarantee terms, not reported past results**, and we'll always tell you which is which.

07 The guarantee, and its edges

On the full Fractional Go-to-Market engagement — both halves running — we guarantee **\$50,000 in new pipeline within 90 days**, or your industry's equivalent: placements for a search firm, contracts for a services business, booked jobs for a trade, patients for a clinic, bookings for a venue. We agree what the number means before we start, in writing.

- **It attaches to the full engagement** — not to a single half, and not to the Embedded Engineer track.
- **Pipeline is defined up front.** Qualified opportunity, on your definition, agreed before day one. Nobody moves the goalposts in either direction.
- **We won't quote you a 10x promise.** Anyone who does is selling you the guarantee instead of the work.

08 The questions you're probably asking

How is this different from just hiring someone?

A hire costs you a salary plus recruiting, benefits and ramp — and then you manage them. Here you pay one flat fee that includes the engineer's salary, and you get us architecting behind them. You're buying a person *and* the senior who directs them, without carrying either on your books.

Is the engineer really working on my business full-time?

Roughly 30–35 hours a week, embedded — in your tools, your Slack, your context. They aren't splitting attention across a dozen accounts the way an agency resource does.

What do you need from me?

Direction and access. Access to the list, the CRM and the tools; and enough of your time in the first few weeks to transfer what's in your head. After that most owners spend under an hour a week on it — because your team escalates to us, not to you.

Can I start with one half and add the other later?

Yes, and most people should. Terms run in 90-day blocks and we re-map the roadmap at every renewal, so adding, switching or narrowing scope happens at a natural break rather than mid-flight.

What if I want to hire the engineer permanently?

There's a buy-out path. If someone becomes indispensable to your business, the right outcome is that they end up in it.

What is "the Single Brain"?

It's the bonus that comes with every option: access to all of our tools, systems, agents and offers — everything we've built across every engagement. It's the reason one embedded engineer outperforms a standalone hire. They aren't starting from scratch.

Does this work in my industry?

The four pillars are industry-agnostic; the definitions aren't. Recruiting, staffing, home services, medical, professional services and coaching each get their own version of what a "lead" and a "win" mean, agreed before we start. If we don't think the model fits your business, we'll say so on the call.

Who is this genuinely not for?

Businesses with no list, no network, no offer and no capacity to deliver new clients if we sent them. We're an amplifier, not a founder. If there's nothing to amplify yet, we'll tell you what to fix first and you can come back.

What does it cost?

Pricing deliberately isn't on this page, because the honest answer depends on which of the three options you actually need — and that's a twenty-minute conversation, not a line item. You'll get a straight number on the call, with no build-up and no anchoring exercise.

Prepared by AI Integraterz. Figures quoted for a specific engagement are targets and guarantee terms agreed in advance, not reported past results, except where explicitly identified as a client outcome. The \$50,000 / 90-day pipeline guarantee attaches to the full Fractional Go-to-Market engagement only.

WHAT HAPPENS NEXT**One call. We'll tell you which of the three you need — including if the answer is none of them.**

Twenty minutes. We'll ask what your single most important objective is for the next 90 days, look at what you already own, and tell you plainly whether this fits. If the honest answer is that you don't need us yet, that's what you'll hear.
